Page 1 of 4

The Challenge:

If you are a K-12 student in the United States, your challenge is to pick a vertebrate animal living in a tropical rainforest and draw/illustrate/predict how it may look in the future due to long term effects of climate change. (Think thousands of years ... or more!) Please consider habitat changes due to rising temperatures and rising seas, and animal adaptations needed to survive, such as camouflage, defense, eating food, and/or how it moves. Some possible habitat changes to consider are: Inland rainforests that become savannas (rolling grasslands with scattered trees & shrubs) or inland rainforests that become mixed woodlands (low density forest with shrubs and trees), or coastal rainforests that become marshes/seasonal wetlands or become completely underwater. Your entry should provide at least two illustrations - one of your animal in its present habitat and one as an adapted animal in its predicted future habitat. Also submit a short essay to explain your illustrations. (You may not choose humans as your animal.)
