TECHRISE

STUDENT CHALLENGE

2026-27 Challenge Overview

<https://www.futureengineers.org/nasatechrise>

The Challenge

NASA is calling on middle and high school students to join the sixth NASA TechRise Student Challenge, which invites students teams to submit experiment ideas to fly on a high-altitude balloon. Students in sixth to 12th grades at a U.S. public, private, or charter school – including those in U.S. territories – are challenged to team up with their schoolmates to design an experiment under the guidance of an educator.

The high-altitude balloon will offer approximately 4-8 hours of flight time at 70,000-95,000 feet and exposure to Earth's upper atmosphere, high-altitude radiation, and perspective views of our planet.

The NASA TechRise Student Challenge seeks to equip America's future workforce with the skills needed to advance the U.S. aerospace economy. The experience provides hands-on learning and opportunities to innovate, fosters practical skills, encourages experimentation, and empowers individuals to build and make.

Note that no experience is necessary to participate in the NASA TechRise Student Challenge!

Prizes

A total of 60 winning teams will be selected to build their proposed experiment. Each winning team will be awarded:

- \$1,500 to build their experiment
- A starter kit, including a flight box in which to build their experiment
- An assigned spot to test the experiment on a NASA-sponsored flight
- Virtual mentorship and technical support during the experiment build phase from Future Engineers advisors, who will help students learn the skills they need to turn their experiment idea into a reality

Watch the Challenge Video!

Challenge Timeline

Regions

- Teams will compete within their state or territory
- Target of at least 1 winner per state or territory

Steps to Enter

- **STEP 1: FORM A TEAM**

Your team needs to have at least four students and one educator/teacher.

- **STEP 2: REVIEW PROPOSAL EXAMPLE & TEMPLATE, EDUCATOR GUIDE, AND RULES**

Your entry needs to be a written proposal that describes your experiment. It's especially important to review both the Proposal Example & Template and Rules to understand the requirements. Team leads (teacher/school employee) can submit an unlimited number of proposals, but each proposal must be unique and only one can be selected as a winner.

- **STEP 3: LEARN ABOUT BALLOONS**

Watch the NASA TechRise Student Challenge high-altitude balloon video and review the balloon brainstorming slide deck and design guidelines to learn about the conditions in Earth's atmosphere and the types of data that can be collected at approximately 70,000 - 95,000 feet.

- **STEP 4: PLAN YOUR EXPERIMENT**

Use the high-altitude balloon brainstorming and components design resources to explore experiment ideas and write your team's proposal/s describing how your team would build their idea if selected as a winner.

- **STEP 5: SUBMIT YOUR PROPOSAL**

Once your team's proposal is done, save it as a PDF so that the team leader (educator/school employee) can submit it online.

Proposal Example & Template

Write up the experiment idea using the [Proposal Example & Template](#).

NASA TechRise 2026-27
PROPOSAL EXAMPLE & TEMPLATE

Your team's entry must be a proposal submitted as a PDF (max 20 MB). Please review the example and template below to develop your proposal. DO NOT include personally identifiable information such as school names, team member first & last names, photos of people, or other identifiable information in your proposal. However, mentioning names of significant figures (e.g., an astronaut) is okay if it helps explain your entry. All other names will be redacted. Once written, the team lead (teacher or school employee) can submit the proposal on the challenge website. Per the NASA TechRise Student Challenge Rules, your team's proposal must be an original creation that has not been previously submitted for or selected as a winner in a promotion or competition of any type. Team leads can submit an unlimited number of proposals. All entries will be judged using the following criteria:

- 40 Points: Impact - To what extent does the submission demonstrate a positive impact on the team's education and community, providing an opportunity for the team to gain new STEM-related skills?
- 20 Points: Connection - How connected is the submission to NASA's mission to explore the unknown in air and space, innovate for the benefit of humanity, and inspire the world through discovery?
- 20 Points: Alignment - How well does the proposed design of the experiment support the team's hypothesis?
- 20 Points: Design - How well does the submission meet the design guidelines?

PROPOSAL TEMPLATE

To develop your NASA TechRise proposal, please use the template linked below and follow the proposal guidelines.

- **Download the MS Word template [HERE](#)**

****Note - You are welcome to recreate the template so long as your proposal includes all of the required sections and meets the required font and margin guidelines listed below.****

PROPOSAL GUIDELINES

Proposal Narrative: Pages 1-3

The proposal narrative should be written by STUDENTS. Generative AI is NOT allowed to create your proposal (spellcheck/grammar checks are allowed). The proposal may not exceed 3 pages (including in-text citations) and should be formatted using 11-point Times New Roman font, single-spaced, with 1-inch margins. The proposal narrative must include an experiment name and the three sections outlined in the Proposal Template, including the *what*, *how*, and *why* of your proposed experiment idea. DO NOT include hyperlinks to additional proposal information, files, or websites you have developed. This is beyond the 3-page limit. All links will be removed prior to judging.

Below, a very basic example for a high-altitude balloon proposal is provided for each proposal element to give teams a sense of the type of information the judges are seeking. This simple text is provided to help teams get started but should not constrain their thinking about the proposal topic or limit the level of detail in their responses.

NASA TechRise 2026-27
PROPOSAL EXAMPLE & TEMPLATE

HIGH-ALTITUDE BALLOON EXPERIMENT: BASIC EXAMPLE

Experiment Name
Please provide a name for your proposed experiment.

Basic Example:

Proposed Experiment Name: Pollution Experiment Technology (PET)

Section 1: WHAT is your team's experiment idea?

****Note: Check out the [High-Altitude Balloon Brainstorm Slide Deck](#) for inspiration.**

1a. What do you want to investigate?
- Explain what you plan to measure, monitor, or evaluate during the flight.

Basic Example:

We want to investigate how polluted the air is.

1b. How does your investigation help to explore space and/or study our home planet?
- Summarize any background research you have done.

Basic Example:

Air pollution is important to NASA Earth scientists because it can change our weather and hurt living things. We want to study pollution so that we can help understand the best ways to keep our planet safe and healthy for everyone.

1c. What is your hypothesis (an educated guess) on what you think will happen during your investigation?
- Summarize what you think you will happen.

Basic Example:

Our hypothesis is that if we go higher in the atmosphere, then there will be less pollution since it is further away from human-made pollution sources.

Design Guidelines

Review the Design Guidelines ([High-Altitude Balloon](#)) before submitting your proposal. A few examples include:

- Your experiment idea must be realistic so that it can be built within ~4 months.
- Your experiment must fit in a 4 inch x 4 inch x 8 inch box.
- Your experiment can weigh no more than 1 kilogram (2.2 pounds).

High-Altitude Balloon Experiment
2026-27 DESIGN GUIDELINES

Below are guidelines to reference when developing your balloon experiment proposal. We encourage participation first and foremost - so you won't be disqualified if your entry doesn't comply with every guideline. But if you do, your entry will score higher!

EXPERIMENT COST AND TIMELINE

When preparing your proposal, keep in mind that all purchased components to build your proposed experiment **should not exceed a total cost of \$1,500**. The judges are not requesting a budget, nor will any team be disqualified based on cost. Still, proposals that require additional funding or outside sponsorship beyond the \$1,500 prize value will score lower. Additionally, all experiments must be feasibly completed within the challenge build period of approximately four months.

HOW HIGH-ALTITUDE BALLOON EXPERIMENTS WILL FLY

A gondola frame will hang from the high-altitude balloon and carry 60 TechRise experiments. All experiments will have the opportunity to sense the atmosphere and capture images in two directions: 1) nadir: looking down to Earth's surface, and 2) horizontal: looking out to the horizon. Payloads will be insulated with foam on three sides (back, left, and right) and access upwards will be blocked, so teams should be sure to plan their experiments to take full advantage of the two sides with a view. Each experiment will be attached to the gondola and plugged in to the balloon's power and data source. All parts of the experiment must remain inside the provided flight box for the entire duration of the flight.

AEROSTAR'S CYCLONE ZERO-PRESSURE BALLOON FLIGHT SUMMARY

Aerostar's Cyclone zero-pressure balloon system is a rapidly-deployable balloon system capable of achieving altitudes from 50,000 ft - 130,000 ft with a wide variety of user payloads. For TechRise, the Aerostar high-altitude balloon will launch from the Midwest US and ascend to the float altitude of approximately 70,000 - 95,000 ft, where it will float for approximately 4-8 hours. Once the flight vehicle reaches float altitude, the system takes advantage of stratospheric wind patterns to steer the balloon. Using altitude control maneuvers like venting lift gas (causing the balloon system to descend) or dropping ballast (causing the balloon system to ascend), the Aerostar flight engineer can find the best wind layer to steer the platform in the desired direction. Once the mission is complete, the Cyclone flight is terminated, and the payloads are cut away from the balloon and descend under a parachute for recovery by Aerostar flight crews. Aerostar's Cyclone zero-pressure balloon system will enable NASA TechRise students to conduct remote sensing and climate/atmospheric experiments.

Entries Due by Nov. 2, 2026, at 11:59 PM PT

A proposal needs to be written by students and submitted by a teacher/educator. All proposals must include the following sections:

- **WHAT** is your team's experiment idea? What do you want to investigate? How does your investigation help to explore space and/or our home planet? What is your hypothesis (an educated guess) on what you think will happen during your investigation?
- **HOW** do you imagine your experiment would work? What components and/or technologies might you need to make it run? Describe what your experiment is (how will you test your hypothesis?) and how it would work during flight using the high-altitude balloon experiment design resources. Provide a diagram of your experiment. Include the major components you would need, how they would fit in your 4x4x8 in. flight box, and describe how they support your experiment.
- **WHY** do you want to propose this experiment idea? Why is this investigation/experiment important to your team and your school? What new knowledge or skills would your team gain by doing this project? How is your experiment connected to one or more of the central parts of NASA's mission?
